Birnbaum & Co.

Florida Land and Colonization Company.

E. R. TRAFFORD, General Manager.

Sanford, Orange County, Fla.

90,000 ACRES OF THE FINEST LANDS IN SOUTH FLORIDA.

For the most part, our lands are known as the Trafford lands, formerly Chief Engineer of the South Florida Railroad, while examining the country for the location of the road, made notes of all the best lands in this vicinity. These selections, purchased by the Florida Land and Colonization Company from the U. S. Government, and are considered the most lands in South Florida. Our titles are clear and direct, and at the time these selections were made, he had the whole State to choose from, as the country was comparatively unoccupied. Confidently, therefore, we can say that the most desirable lands in South Florida, obtained by being engaged in the government and other surveys for the past eighteen years, his judgment of Florida lands is unequalled. These lands are now on the market for the first time.

Two hundred deep, clear spring lakes, with a radius of ten miles. Their high banks timbered with a luxuriant growth of pine and oak and being on the very summit of the dividing ridge of the peninsula of Florida. Its dry air offers an inducement to the invalid. Its beautiful and diversified scenery, boating, fishing, etc., offers the finest opportunity for people of taste to acquire a lovely winter home, when all the pleasures and comforts of our balmy climate can be enjoyed. The sugar planter from Cuba, who selected this point, after looking over the whole State, has made his home here, and the facts that both the South Florida and the Barrow Branch Railroads run several miles from the tract, and that the most desirable lands in South Florida, obtained by being engaged in the government and other surveys for the past eighteen years, his judgment of Florida lands is unequalled. These lands are now on the market for the first time.

THE LAKE REGION OF POLK COUNTY.

On the main line of the South Florida Railroad, two hundred and fifty feet above tide water. The land is well adapted to the cultivation of the rice, sugar, and other crops. The soil is rich and fertile, and the water is pure and sweet. The land is now on the market for the first time.
